

# Stuff learned building a wallet

Ололо пыщъ пыщъ

Igor Korsakov / bluewallet.io / Riga / 2022

**Open source is a little surprise box. Truly amazing to experience at some scale. Across repos there's 200+ contributors.**

(and you dont even need money if you have twitter likes)

Also, tech can be replicated. Human connections can't

**Twitter doesn't represent bitcoin users. It is a very small pool**

**With some users the scammers will come.  
There's a lot of scams going on on bitcoin.**

**Massive adoption is happening in  
Nigeria/Brazil/Thailand, etc**

**Lightning is cool, but we don't really know if it will work.**

**More effort should be put on the first layer. We need more privacy and less coins lost.**

**Bitcoin ux is not hard. Understanding money and *bitcoin* is**

**We suck when most needed (eg donations to causes)**

**BIP39 is widespread, stop making your own  
better BIP39**

AEZEED is prob the only one thats superior

# Tor sucks, we need alternatives

**Be a nym, don't compromise on this**

**BIP47 should be widespread**

# Open standards rock!

**Bitcoin is our best chance in an over-surveilled world. Keep writing code keep building better tools**
